CertiK Assessed on Mar 17th, 2026

MimboGameGroup - SPL Token Verification

The security assessment was prepared by CertiK.

Executive Summary

TYPES	ECOSYSTEM	METHODS
DeFi	Solana (SOL)	Manual Review

LANGUAGE	TIMELINE
Rust	Preliminary comments published on 03/16/2026
	Final report published on 03/17/2026

Vulnerability Summary

1	0	0	1	0
Total Findings	Resolved	Partially Resolved	Acknowledged	Declined

1	Centralization	1 Acknowledged	Centralization findings highlight privileged roles & functions and their capabilities, or instances where the project takes custody of users' assets.
0	Critical		Critical risks are those that impact the safe functioning of a platform and must be addressed before launch. Users should not invest in any project with outstanding critical risks.
0	Major		Major risks may include logical errors that, under specific circumstances, could result in fund losses or loss of project control.
0	Medium		Medium risks may not pose a direct risk to users' funds, but they can affect the overall functioning of a platform.
0	Minor		Minor risks can be any of the above, but on a smaller scale. They generally do not compromise the overall integrity of the project, but they may be less efficient than other solutions.
0	Informational		Informational errors are often recommendations to improve the style of the code or certain operations to fall within industry best practices. They usually do not affect the overall functioning of the code.

AUDIT SCOPE | MIMBOGAMEGROUP - SPL TOKEN VERIFICATION

APPROACH & METHODS

MIMBOGAMEGROUP - SPL TOKEN VERIFICATION

This audit was conducted for MimboGameGroup to evaluate the security and correctness of the smart contracts associated with the MimboGameGroup - SPL Token Verification project. The assessment included a comprehensive review of the in-scope smart contracts. The audit was performed using a combination of Manual Review.

The review process emphasized the following areas:

- Architecture review and threat modeling to understand systemic risks and identify design-level flaws.
- Identification of vulnerabilities through both common and edge-case attack vectors.
- Manual verification of contract logic to ensure alignment with intended design and business requirements.
- Dynamic testing to validate runtime behavior and assess execution risks.
- Assessment of code quality and maintainability, including adherence to current best practices and industry standards.

The audit resulted in findings categorized across multiple severity levels, from informational to critical. To enhance the project's security and long-term robustness, we recommend addressing the identified issues and considering the following general improvements:

- Improve code readability and maintainability by adopting a clean architectural pattern and modular design.
- Strengthen testing coverage, including unit and integration tests for key functionalities and edge cases.
- Maintain meaningful inline comments and documentations.
- Implement clear and transparent documentation for privileged roles and sensitive protocol operations.
- Regularly review and simulate contract behavior against newly emerging attack vectors.

REVIEW NOTES | MIMBOGAMEGROUP - SPL TOKEN VERIFICATION

MGG Token (Wormhole)

The `MGG Token (Wormhole)` token is a **Fungible token created by the Solana Token Program with metadata**.

The current basic information of the token can be acquired from the chain.

```
SPL Token Mint
  Address: JBQXZYo1PAKQkePTZerBmMU5ujcMm177wyyQza8S8gNg
  Program: TokenkegQfeZyiNwAJbNbGKPFXCWuBvf9Ss623VQ5DA
  Supply: 0
  Decimals: 8
  Mint authority: BCD75RNBHrJJpW4dXVagL5mPjzRLnVZq4YirJdjEYMV7
  Freeze authority: (not set)
```

Token Distribution

Token distribution refers to the way tokens are allocated or spread out across potential holders and uses within the ecosystem.

The current supply is 0.00000000 (8 decimals), indicating the total number of tokens issued or created up as of 03/16, 2026.

Minting Authority

The minting authority is an address or entity granted permission to create tokens within a token's ecosystem.

Based on the on-chain analysis, the mint authority is set to BCD75RNBHrJJpW4dXVagL5mPjzRLnVZq4YirJdjEYMV7, meaning that additional tokens can be minted beyond the current supply.

The minting process is part of the bridge mechanism, where MGG tokens are locked on the BSC network and the corresponding tokens are minted on the Solana network through the Wormhole bridge.

Freeze Authority

The freeze authority is a control mechanism within spl token ecosystems that allows the designated authority to prevent specific accounts from transferring tokens.

Based on the on-chain analysis, the freeze authority is not set, meaning that no accounts can be prevented from transferring tokens.

MetaData and Update Authority

Metadata provides detailed information about the token, including its name, symbol, and other descriptive elements that help users and programs identify and interact with the token.

The `MGG Token (Wormhole)` Token's metadata can be viewed on the Solana Explorer Website.

The metadata account is 45mdrwDeCbFioJMZy9mdMw8rHijs1drbH7Vbphvbwyrq.

The update authority, identified by the account BCD75RNBHrJJpW4dXVagL5mPjzRLnVZq4YirJdjEYMV7 for `MGG Token (Wormhole)` Token, holds the privilege to modify this metadata.

Token Extensions

Token extensions refer to additional features or capabilities that can be integrated into a token's design, beyond the standard functionalities.

The `MGG Token (Wormhole)` token does not use the Token 2022 program, there are no extra features or extensions beyond the basic SPL token functionalities implemented.

External Dependencies

The project `MGG Token (Wormhole)` Token uses the pre-built SPL token program (TokenkegQfeZyiNwAJbNbGKPFXCWuBvf9Ss623VQ5DA) on the Solana chain to generate fungible tokens. Unlike on the EVM-based chain, the built-in SPL token program eliminates the need to create an individual token contract/program.

Note: The SPL token program is a component of the Solana blockchain and its security ought to be ensured by Solana. Additionally, the SPL token program is an integral part of the Solana blockchain and is secured by the Solana network.

FINDINGS | MIMBOGAMEGROUP - SPL TOKEN VERIFICATION

1	0	1	0	0	0	0
Total Findings	Critical	Centralization	Major	Medium	Minor	Informational

This report has been prepared for MimboGameGroup to identify potential vulnerabilities and security issues within the reviewed codebase. During the course of the audit, a total of 1 issue was identified. Leveraging a combination of Manual Review the following findings were uncovered:

ID	Title	Category	Severity	Status
MF3-02	**Centralization Related Risks**	**Centralization**	**Centralization**	**Acknowledged**

MF3-02 | Centralization Related Risks

Category	Severity	Location	Status
Centralization	**Centralization**		**Acknowledged**

Description

According to the on-chain data, the following authority involved with the `MGG Token (Wormhole)` token:

- Mint authority has been assigned to the BCD75RNBHrJJpW4dXVagL5mPjzRLnVZq4YirJdjEYMV7.
- The metadata update authority is centralized to a single account BCD75RNBHrJJpW4dXVagL5mPjzRLnVZq4YirJdjEYMV7.

Any compromise of the aforementioned accounts or authorities could allow an attacker to mint any number of tokens during circulation, thereby disrupting normal market trading. Additionally, if the metadata update authority is compromised, attackers could maliciously manipulate the contract metadata, which could mislead users and platforms, disrupting ecosystem operations based on incorrect token information.

Recommendation

The risk describes the current project design and potentially makes iterations to improve in the security operation and level of decentralization, which in most cases cannot be resolved entirely at the present stage. We advise the client to carefully manage the privileged account's private key to avoid any potential risks of being hacked. In general, we strongly recommend centralized privileges or roles in the protocol be improved via a decentralized mechanism or smart-contract-based accounts with enhanced security practices, e.g., multisignature wallets.

Indicatively, here are some feasible suggestions that would also mitigate the potential risk at a different level in terms of short-term, long-term and permanent:

Short Term:

Timelock and Multi sign (⅔, ⅗) combination *mitigate* by delaying the sensitive operation and avoiding a single point of key management failure.

- Time-lock with reasonable latency, e.g., 48 hours, for awareness on privileged operations;
  AND
- Assignment of privileged roles to multi-signature wallets to prevent a single point of failure due to the private key compromised;
  AND
- A medium/blog link for sharing the timelock contract and multi-signers addresses information with the public audience.

Long Term:

Timelock and DAO, the combination, *mitigate* by applying decentralization and transparency.

- Time-lock with reasonable latency, e.g., 48 hours, for awareness on privileged operations;
  AND
- Introduction of a DAO/governance/voting module to increase transparency and user involvement.
  AND
- A medium/blog link for sharing the timelock contract, multi-signers addresses, and DAO information with the public audience.

Permanent:

Renouncing the ownership or removing the function can be considered *fully resolved*.

- Renounce the ownership and never claim back the privileged roles.
  OR
- Remove the risky functionality.

Alleviation

[MimboGameGroup, 03/16/2026]: The team acknowledged this issue and stated that the current token is a standard SPL token. The minting process is part of the bridge mechanism, where MGG tokens are locked on the BSC network and the corresponding tokens are minted on the Solana network through the Wormhole bridge.

[CertiK, 03/16/2026]: It is suggested to implement the aforementioned methods to avoid centralized failure. Also, CertiK strongly encourages the project team to periodically revisit the private key security management of all addresses related to centralized roles.

Finding Categories

Categories	Description
Centralization	Centralization findings detail the design choices of designating privileged roles or other centralized controls over the code.

DISCLAIMER | CERTIK

This report is subject to the terms and conditions (including without limitation, description of services, confidentiality, disclaimer and limitation of liability) set forth in the Services Agreement, or the scope of services, and terms and conditions provided to you ("Customer" or the "Company") in connection with the Agreement. This report provided in connection with the Services set forth in the Agreement shall be used by the Company only to the extent permitted under the terms and conditions set forth in the Agreement. This report may not be transmitted, disclosed, referred to or relied upon by any person for any purposes, nor may copies be delivered to any other person other than the Company, without CertiK's prior written consent in each instance.

This report is not, nor should be considered, an "endorsement" or "disapproval" of any particular project or team. This report is not, nor should be considered, an indication of the economics or value of any "product" or "asset" created by any team or project that contracts CertiK to perform a security assessment. This report does not provide any warranty or guarantee regarding the absolute bug-free nature of the technology analyzed, nor do they provide any indication of the technologies proprietors, business, business model or legal compliance.

This report should not be used in any way to make decisions around investment or involvement with any particular project. This report in no way provides investment advice, nor should be leveraged as investment advice of any sort. This report represents an extensive assessing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology.

Blockchain technology and cryptographic assets present a high level of ongoing risk. CertiK's position is that each company and individual are responsible for their own due diligence and continuous security. CertiK's goal is to help reduce the attack vectors and the high level of variance associated with utilizing new and consistently changing technologies, and in no way claims any guarantee of security or functionality of the technology we agree to analyze.

The assessment services provided by CertiK is subject to dependencies and under continuing development. You agree that your access and/or use, including but not limited to any services, reports, and materials, will be at your sole risk on an as-is, where-is, and as-available basis. Cryptographic tokens are emergent technologies and carry with them high levels of technical risk and uncertainty. The assessment reports could include false positives, false negatives, and other unpredictable results. The services may access, and depend upon, multiple layers of third-parties.

ALL SERVICES, THE LABELS, THE ASSESSMENT REPORT, WORK PRODUCT, OR OTHER MATERIALS, OR ANY PRODUCTS OR RESULTS OF THE USE THEREOF ARE PROVIDED "AS IS" AND "AS AVAILABLE" AND WITH ALL FAULTS AND DEFECTS WITHOUT WARRANTY OF ANY KIND. TO THE MAXIMUM EXTENT PERMITTED UNDER APPLICABLE LAW, CERTIK HEREBY DISCLAIMS ALL WARRANTIES, WHETHER EXPRESS, IMPLIED, STATUTORY, OR OTHERWISE WITH RESPECT TO THE SERVICES, ASSESSMENT REPORT, OR OTHER MATERIALS.
